Bibliography on Snow and Ice Friction

Samuel C. Colbeck

May 1993

Abstract

This is a bibliography compiled for use by anyone interested in friction on snow or ice surfaces. The items are separated into snow and ice categories because the physical processes and the problems on these two surfaces are somewhat different. There is some repetition between the lists because some references are appropriate for both subjects. The references were selected because they were of direct interest to the subject of friction and not just because knowledge of friction was important in the study. That is, the references selected provide information about friction and do not just use such information.

For conversion of SI metric units to U.S./British customary units of measurement consult ASTM Standard E380, *Standard Practice for Use of the International System of Units (SI)*, published by the American Society for Testing and Materials, 1916 Race St., Philadelphia, Pa. 19103.

This report is printed on paper that contains a minimum of 50% recycled material.

Bibliography on Snow and Ice Friction

Samuel C. Colbeck

May 1993

Prepared for
OFFICE OF THE CHIEF OF ENGINEERS

Approved for public release; distribution is unlimited.

PREFACE

This report was prepared by Dr. Samuel C. Colbeck, Geophysicist with the Snow and Ice Branch, Research Division, U.S. Army Cold Regions Research and Engineering Laboratory (CRREL). It was funded by DA Project 4A762784AT42, *Design, Construction, and Operations Technology for Cold Regions*; Task FS, *Fire Support*, Work Unit 003, *Radiational Effects on Snow Signatures*.

The contents of this bibliography were taken from the *Bibliography on Cold Regions Science and Technology* and the Arctic Science and Technology Information System.

The contents of this report are not to be used for advertising or promotional purposes. Citation of brand names does not constitute an official endorsement or approval of the use of such commercial products.

Bibliography on Snow and Ice Friction

SAMUEL C. COLBECK

These lists were compiled for use by anyone interested in friction on snow or ice surfaces. They are separated into two categories because the physical processes and the problems are somewhat different on these two surfaces. For example, skiers can use the snow list without having to go through a larger, combined list. There is some repetition between the lists because some references are appropriate for both subjects.

In selecting these references I eliminated many that were not of direct interest to the subject of friction although knowledge of friction was important in the study. That is, I tried to select references that provided information about friction and not just references that used such information. I did not examine all of the references directly but sometimes used key words and the title as a guide. I made no judgment about the value of the reference but tried to include all references that could provide information about friction.

4. TITLE AND SUBTITLE Bibliography on Snow and Ice Friction				5. FUNDING NUMBERS DA: 4A762784AT42 TA: FS WU: 003	
6. AUTHORS Samuel C. Colbeck					
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) U.S. Army Cold Regions Research and Engineering Laboratory 72 Lyme Road Hanover, New Hampshire 03755-1290				8. PERFORMING ORGANIZATION REPORT NUMBER Special Report 93-6	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES) Office of the Chief of Engineers Washington, D.C. 20314-1000				10. SPONSORING/MONITORING AGENCY REPORT NUMBER	
11. SUPPLEMENTARY NOTES					
12a. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution is unlimited. Available from NTIS, Springfield, Virginia 22161.				12b. DISTRIBUTION CODE	
13. ABSTRACT (Maximum 200 words) This is a bibliography compiled for use by anyone interested in friction on snow or ice surfaces. The items are separated into snow and ice categories because the physical processes and the problems on these two surfaces are somewhat different. There is some repetition between the lists because some references are appropriate for both subjects. The references were selected because they were of direct interest to the subject of friction and not just because knowledge of friction was important in the study. That is, the references selected provide information about friction and do not just use such information.					
14. SUBJECT TERMS Friction Ice friction Lubrication Snow friction				15. NUMBER OF PAGES 18
